

I put the clickable Video on the Clie and used its WiFi to communicate but the storage capacity was too small even with the latest ultra card... but people were fascinated.

the idea of the Portable Digital Library was waiting for a larger capacity and faster WiFi device, the Apple G4 Titanium notebook was next, it worked fine.

the Mac Mini was used after the older installation consisting of two Apple Anniversary \$7500ea. networked to the Apple G4 Cube OSX Server using iView and Cantos.

The Marco house had a IBM NetFinity 5500 NT Server, and a Gateway NT Server, two Apple G4 PowerMacs, three IBM Aptiva's, connected to a Cisco 24 port router to the Gateway. The house had the ability to retrieve any docs on the NetFinity.
