CodeBase is an xBASE Compatible Database Engine
for Visual Basic Programmers

EDMONTON, Alberta, Sept. 12 /PRNewswire/ -- Sequiter Software today announced plans to ship CodeBase 6.0 on November 1, 1995. CodeBase takes full advantage of the 32-bit architecture featured in Microsoft(R) Visual Basic(R) 4.0 through the addition of DLLs that replace Visual Basic's database engine.

"Sequiter is strategically committed to providing support for Visual Basic 4.0 database programmers who refuse to compromise development speed with application performance," says Ken Sawyer, president of Sequiter Software. "CodeBase seamlessly hooks into Visual Basic and replaces its standard database engine. So developers still use Visual Basic's other features, thus achieving optimal performance."

CodeBase is an xBASE compatible database engine for Visual Basic programmers. It is multi-user compatible with the latest releases of Microsoft FoxPro(R), Clipper and dBASE. Developers will enjoy CodeBase's scalability as they move their applications from a single user environment all the way to client/server technology without changing a single line of their source code. And unlike most client/server tools, CodeBase carries no royalty fees!

"Database application developers can use CodeBase to create both stand-alone and client/server programs that are fast, xBASE compatible, and small," says Sawyer. "With Visual Basic and CodeBase, programmers get a powerful, yet easy to use platform for database application development."

CodeBase will be available from Sequiter Software on November 1, 1995. It will sell for \$295.
